

Why Partner With VDCI?

We believe that everyone deserves peace of mind when enjoying the outdoors, but nuisance mosquito populations and disease outbreaks can threaten public health. When you partner with our experienced scientists and experts, you can rest easy knowing that VDCI is focused on protecting your community and helping improve the quality of life for your citizens.

Our Differentiators

- Our accomplished team of entomologists, technicians, and industry thought leaders have decades of experience studying mosquitoes and safeguarding public health.
- We use science and data to support environmentally-responsible Integrated Mosquito Management programs.
- From drones and aircraft, to specialized equipment and laboratories, our team is at the forefront of innovation in mosquito management.
- We educate the public on mosquito prevention and personal protection through freely available resources and local partnerships.

3 Steps to Creating Safe, Enjoyable Outdoor Spaces

For over 30 years, VDCI has protected communities through integrated programs built on surveillance and disease testing. We can help you create safer outdoor environments in three steps:

1. Connect With Mosquito Management Experts

2. Build Your Integrated Mosquito Management Plan

3. Create Enjoyable Outdoor Spaces for Your Community

Your Government Partner in Mosquito Management

Aerial Advantage

VDCI is one of the only companies in the nation with an in-house aerial fleet dedicated to providing larvicide and adulticide applications. Our expert team has 50,000+ combined hours of experience using aircraft with GPS, spray optimization, and cutting-edge weather monitoring systems.

Emergency Response

During disease outbreaks or following major storms, safeguarding public health is paramount. VDCI assists communities and collaborates with government leaders by strategizing post-storm or crisis mosquito control efforts.

Industry Expertise

Protecting our communities demands both dedication and specialized knowledge. Our team includes experts spanning various fields, including PhDs, researchers, pilots, and skilled technicians.

Science-Backed Management

VDCI's Integrated Mosquito Management programs are rooted in science. By implementing action thresholds and conducting ongoing mosquito surveillance, we help ensure that control measures are performed only when needed.

Community Outreach

We are dedicated to equipping our government partners and their citizens with educational resources, helping to ensure community-wide awareness about mosquito-related risks and control measures.

Integrated Mosquito Management is the gold standard to minimize the spread of disease while promoting environmental safety. Integrated programs prioritize preventive measures, reserving more assertive intervention for only when and where it's needed.

Testimonials

"They help us meet our goals by working in partnership with city staff to mitigate the risk of West Nile virus through larviciding and adulticiding."

- Assistant Fire Chief

"Hiring VDCI was the best decision I ever made."

- Director of Public Works

"They have done everything and beyond... I have been recommending them to everyone in our metroplex who contacts us with questions about our program."

- Director of Public Works
